

INTRODUCTION

WSR-88D Job Sheets

JOB SHEET PURPOSE

These Job Sheets are designed to help you learn how to display and manipulate WSR-88D products. They are arranged to approximate the sequence as appear in the course and are titled, numbered, and grouped together by topic.

The Job Sheets are in a loose leaf binder so they may be updated or other Job Sheets added. The date (Month/Year) of the job sheet update is indicated at the top of the first page on the left-hand side. For example, the October 1998 update of a Job Sheet is indicated by "10/98" and placed on the first page.

NOTE: The September 1996 update of this Job Sheet book was a complete revision and all references to software build changes was omitted.

FORMAT

Each Job Sheet is divided into four sections.

1. INTRODUCTION
2. OBJECTIVE
3. REFERENCE
4. PROCEDURE

The **INTRODUCTION** briefly discusses the purpose of the Job Sheet. The **OBJECTIVE** outlines what level of proficiency that is expected upon completion of the Job Sheet. The **REFERENCES** list where you can find more information concerning the subject of the Job Sheet. The **PROCEDURE** describes the steps required to complete the Job Sheet Objective.

Job sheet procedures usually require the use of some or all of the following equipment.

1. Graphic Tablet at the Principal User Processor (PUP)
2. Applications Terminal at the PUP
3. System Console at the PUP
4. Application Terminal at the Unit Control Position (UCP)
5. System Console at the UCP

The equipment required is indicated in the body of the Job Sheet at the appropriate location.

In the Procedure Section:

1. **Numbered sentences** are Procedure steps requiring some kind of action.
2. **Lettered sentences** give details of Procedure steps.
3. **Dashed sentences** describe the result of the performed action and/or provide additional information.

An example of the Graphic Tablet, Applications Terminal Menus, or Keyboard appears on the page adjacent to the Procedure Steps. Numbers and/or letters on the example correspond to Procedure steps and information noted above.

Some Job Sheets are optional for the course because they merely enhance subjects covered in other Job Sheets. Optional Job Sheets are placed together under "Supplemental Job Sheets" in both the Graphic Tablet and Applications Terminal section of the book.
